

About 'STEM Publications'

What:

Am a writer/editor in school STEM magazines and newsletters, writing articles about anything relevant I find interesting and am passionate about. I have written about everything from upcoming events related to AI and launches of revolutionary telescopes in the newsletters to ways of creating artificial gravity in the magazines.

Why:

To spread my love for science and influence others!

How:

Weekly meetings, where we discuss ideas to add on the next publication, discuss ways to advance our love for science (through competition ideas, for example), and plan our next steps.

What skills I learnt/developed:

Communication skills- When learning how to write concisely to engage the audience in the article/news, stimulate their curiosity, and encourage them to find out more!

Organization skills- When planning an international competition, creating timelines and action plans and ensuring we stick to those as much as possible.

Teamwork and collaboration- When learning from more experienced writers and helping newcomers.

Attention to detail- When proof-reading my articles and editing those of my fellow writers, to maintain clarity and get the intended knowledge across effectively.

Research skills- When finding potential topics to write about, which are of my interest, which my target audience would enjoy, and which are of a different topic than what the other writers would draft.

Knowledge about a field I am passionate about!

What I plan to do next:

Help expand the team outside my school (and around Brighton first), to publish newsletters and magazines more frequently to reach a greater audience.

Continue writing in various publications at university!
